③

Seven、common problem

1.Question: When adding a device, it shows that the password is wrong or forgotten password which set after the last connection?

Answer:The device may have a password or have been changed or reset. "Reset button"(using Ushaped reset pin)long press for 5 seconds,the device voice prompt appears "Reset is successful",it meansthat the device password has been reset successfully.Follow the steps above to add it again,that's it.

2.Question: Is the device offline in the device list?

Answer:Please check whether the device is connected to the Internet normally,please check whether the power supply of the device isnormal, power off the device and restart it,and try to see if it returns to normal.

3.Question: What should I do if the mobile APP cannot receive the push?

Answer:Please check whether push is turned on(it shows that it has been subscribed is turned on)and whether there is alarm push linkage (Settings-Alarm Settings)

4.Question: The playback video does not search for the video file?

Answer:Please check whether the SD card is damaged,whether there is an SD card installed,check the device time,and check whetherthe playback video time is correct.

5.Question: The device cannot connect toWifi ?

Answer:Is it because the distance between the device and the device is too far,the hotspot connected to the mobile phone and the current device is incorrect,the router does not turn on the DHCP function, and the connected Wifi is 5G (device the next line must come up Does not support 5G,only supports 2.4G),the router has turned on the anti-rubbing function to filter the equipment.
