- Made of metal shell; ALPS rotary shaft supports 30 anchor points every lap & 360° infinite rotation; Accessories: USB cable; Size: 63X50X40 mm
- Simple usage: Just insert it to your computer, then it will start to work; if you use it with OTG cable, it can also work for phone; Knob control: one key mute function--just one press on the knob, it will stop

immediately and back to music when you press again

- Supports Win10/8/7/Vista/XP/Mac; Application: use it for watching videos, playing games, even will be the best volume controller for various activities, wedding, celebration, meeting, performing and etc; Safe for using because the controller is not connected to the audio cable which will easily dropped and causing noise
- Advantages: Compare with the potentionmeter volume regulator which connects 3.5mm AUX wire in series, no need to install any driver or software on your PC to drive this volume regulator, it will work once you plugging on the device; The USB volume adjuster directly adjusts your Windows volume which won't

cause distortion and noise

- A breathing light built under the volume knob; In default mode, the breathing light only lights on under every pressing on the knob; If you want the breathing light lights on all the time especially at night, long-press the knob for more than 8 seconds then the volume controller will be set to night mode

Speed Setting Function

According to your usage habit, the output power of the speaker or headphone can be chosen between the 2 speed modes

Deafault Mode

Windows volume will be 2% increased when you rotate the knob to each anchor points;

The volume can be 0-100% adjusted after 2 laps rotation;
More fine & high accuracy adjustment, suitable for high power usage (this mode is recommended to Android)

High Speed Mode

Windows volume will be 4% increased when you rotate the knob to each anchor points;

The volume can be 0-100% adjusted after 1 laps rotation;
Less rotation can change the volume a lot, faster adjusting, great for headphone, laptop built-in speaker, low power speaker

Mode Switching

Switching between 2 modes and the mode will be saved automatically. After operation (after just connecting the USB cable), LED breathing light will lights up twice which means the volume controller is in Default Mode, or the light flashes 10 times quickly means the volume controller is in High Speed Mode

Under Default Mode, press and rotate the knob can quickly adjust the volume
Under High Speed Mode, press and rotate the knob which is default speed volume adjust
