## Hardware Overview

❶ 5G Antenna
❷ 2.4G Antenna
❸ Grounding Terminal
❹ Status LED
❺ WAN/LAN Port (PoE)
❻ Pair/Reset Button

01

---

**Reset Button**
Press and hold for 6 seconds to restore the device to default settings.

**Pair Button**
Press and hold for 1 second to pair with the existing EasyMesh WiFi system.

**Default Parameters**
2.4G SSID: WAVLINK-AX_XXXX    Default Login Password: admin
5G SSID: WAVLINK-AX_5G_XXXX   Official Website: www.wavlink.com
Default IP: 192.168.10.1      Technical Support: support@wavlink.com
Login: http: //waplogin.link

### LED Indicator

| Mode | LED Status | Description |
|---|---|---|
| Router mode | Slow blinking | No Internet/The device is in pair. |
| | Solid on | The device has connected to the Internet. |
| Repeater mode | Slow blinking | The device has connected to the upstream router but no access to the Internet. |
| | Solid on | The device has connected to the upstream router and the Internet has been connected. |
| | Fast blinking | The device has not connected to the upstream router. |
| Agent mode | Slow blinking | The device has connected to the upstream router but no access to the Internet. |
| | Solid on | The device has connected to the upstream router and the Internet has been connected. |
| | Fast blinking | The device has not connected to the upstream router. |
| AP mode | Solid on | The device has connected/disconnected to the Internet. |

## Installation

### 1. Assembly

Rubber ring

① Pass the RJ45 cable through the waterproof connector cover.
② Screw the waterproof seal into the waterproof connector bracket.
③ Pass the RJ45 cable through the waterproof connector bracket, and screw the waterproof connector bracket into the cover.
④ Put the waterproof sealing ring on the waterproof connector bracket.
⑤ Connect the RJ45 cable to WAN/LAN port.
⑥ Screw the connecting cable into the 2.4G and 5G antenna connector and screw up the connector.

Tighten          Loosen

Note: Turn the wrench counterclockwise during assembly to tighten the bracket; Turn the wrench clockwise to loosen the bracket during disassembly.

03

---

### 2. Installation
**2.1** Fix the device to the post with cable ties, or fix the device to the wall with screws, then follow the assembly step to install.

Note: If it is installed in an area where lightning occurs frequently, we recommend you to install the device via a ground connection to strengthen the lightning protection function.

**2.2** Connection
2.2.1 Passive PoE
(1) Wired(For Router/ AP Mode)

PoE Converter

(2) Wireless(For Repeater/Mesh Agent Mode)

PoE Converter

04

---

① Connect the "⚡PoE" port of the PoE converter with an Ethernet cable to the WAN/LAN port of the device.
② Connect the "LAN DATA IN" port of the PoE converter via another Ethernet cable to a "LAN" port on your router. If you choose to connect to the superior wirelessly, please ignore this step.
③ Plug the power plug into the "DC IN(37-57V)" port of the PoE converter, and then plug the power adapter into a power outlet.

2.2.2 Active PoE (For AP/Router Mode)

PoE switch

**Attention:**
1. Make sure you are using a certified CAT5e/CAT6 Ethernet cable with RJ45 connectors.
2. Make sure the Ethernet cable length is less than 100 meters(328 feet).
3. If it is fixed on the post, the length of the post must be less than the length of the cable ties.

### Configuration

#### 1. Connecting to PC
**1.1 Via Wireless**

05

---

① Disconnect the Ethernet cable from your computer (if you have one).
② Turn on your WiFi, find the SSID of this product on your wireless devices(smartphone, tablet computer, laptop, et.) and place a connection.

For Windows users          For Mac users

**1.2 Via Cable**

LAN          LAN DATA IN Port

① Connect the Ethernet cable to your PC/Laptop and the LAN DATA IN port of your PoE converter, then you can start the configuration of the device.

If you are using the AP/Router function of this device, please connect the LAN DATA IN Port to the LAN port of the upper router after finishing 4.3 and 4.4.

**2.** When the router is connected to your devices at its first time, the login page will pop up, you also can enter 192.168.10.1 or waplogin.link into the address bar or browser of your PC/laptop or phone. The default password is admin.

## 4. Mode Selection
This product has 4 modes.

### 4.1 Repeater Mode
For Repeater mode, we recommend you to choose "WISP", you can manually enter the WiFi SSID you need to connect or select the WiFi SSID in the list, and the Password needs to be the same as the WiFi password that this product has connected, then click on "Connect".

### 4.2 EasyMesh Agent Mode
If you have a router that supports EasyMesh function, then you can build a mesh system with this mode. Please configure according to the following steps:
1. Log in to 192.168.10.1 or waplogin.link.
2. In Mode Selection, please choose "EasyMesh Agent Mode".
3. Click on the "Save" button.
4. Enter the Pair Key of this device in the mesh network of the main router, or you can separately keep pressing the Pair button on the main router and sub=router for 1 second.

08

---

Note: If you are not sure how to start, please ask manufacturer for help.

### 4.3 AP Mode(LAN Bridge)
You can change the SSID or use the default one, as for the Encryption Mode, the default is WPA2-PSK, we recommend you to select WPA3/WPA2-MIX if your devices support. For your network security, please set a new password according to the rule. Then click on "Save" and wait for the setting process to complete.

**Which WAN Type am I supposed to choose?**
If you use DSL line and you are only provided an account name and a password by your ISP, choose PPPoE. If you use cable TV or fiber cable, choose DHCP(Dynamic IP). If you are provided information such as IP address, Subnet Mask and Default Gateway, choose Static IP.

### Wi-Fi Password Management
When you need to change your Wi-Fi password, please click on "Wireless".

09

---

### 4.4 Router Mode
If you choose the Router Mode, the system will guide you to select the WAN Type. As for the Encryption Mode, the default is WPA2-PSK, we recommend you to select WPA3/WPA2-MIX if your devices support. For you network security, we suggest you set a Password.

### Firmware Upgrade
If you need to update firmware, please proceed as the following steps:
**Option I**
1. Download the latest firmware file on Wavlink website (www.wavlink.com=>SUPPORT->Firmware).
2. Extract the firmware from the downloaded file.
3. Log in to waplogin.link or 192.168.10.1, then choose "Advanced" and select "Firmware Update".

10

---

4. Click on 🖿 to locate the firmware file.
5. Click on "Upload" and choose "Apply", and wait for the firmware upgrade process to complete.

**Option II**
1. Log in to 192.168.10.1 or waplogin.link, then choose "Advanced" and select "Firmware Update".
2. Click on "Check New Version" to find the latest version.
3. Click on "Download and Upgrade", and wait for the firmware upgrade process to complete.
Note: After updating firmware, please Reset The Device And Clear Your Browser Cache.

**What is firmware upgrade and why do I need it?**
Firmware fixes bugs for your device, contains new features, and improves the experience of using the product. For your device update and security, please ask us for help, wrong upgrade may damage your device and void the product warranty.
For more details, please visit our website www.wavlink.com and our technical support: support@wavlink.com.

### More Mesh Devices
Generally, a mesh router device supports up to 7(including the existing device). Therefore, if you need to add more mesh devices to build up a stable network in your home, you simply need to pair the new mesh devices with the existing network.
1. Log in to waplogin.link or 192.168.10.1.
2. "Advanced" -> "Mesh Network".
3. You can add extra devices by entering their "Pair Key", and the sub=routers must be Mesh Agent Mode. You also can add extra devices by separately keeping pressing the Pair button for 1 second on the main router and sub=router after setting the sub=router as EasyMesh Agent Mode.

11                    12

### FAQ

**Q1. Why doesn't the login page appear after entering http://waplogin.link?**
- If your computer is wirelessly connected, please verify that you have connected to the device's SSID. If your computer is connected via an Ethernet cable, please verify that the connection is stable.
- Make sure your computer is set to obtain an IP address automatically.
- Use the IP address to log in to the page. The default IP is 192.168.10.1. If the device is connected to the host Wi-Fi, please go to the router's DHCP client list to obtain the device's current IP address.
- If the problem still exists, please reset the device again.

**Q2. How do I restore the device to its factory default settings?**
- While the device is powered on, press and hold the Reset Button until all the LEDs turn on momentarily,

13

---

**Q3. What should I do if the LED does not change to solid after completing?**
- You may have entered the incorrect Wi-Fi password of your host Wi-Fi during the configuration. Please log into the device's web-based interface to check the password and try again.
- Reset the device and go through the configuration again.

For more details, please refer to www.wavlink.com.
